

jQuery Yes or No survey Plugin

What is this plugin for?

This plugin has been developed as a “2 answers” poll plugin. With this one infact you can count user total clicks, get clicks percentage and see these values on your dynamic bars.

This version is javascript only, so you can't immediatly use it with a db or control multiple clicks, but you can implement AJAX functions to do these using PHP and MySQL.

Usage instructions

In order to use the plugin you should:

- Include jQuery 1.6+ in your html page
- Include jquery.ynosurvey.js in your html page
- Call the script on document ready doing something similar this:

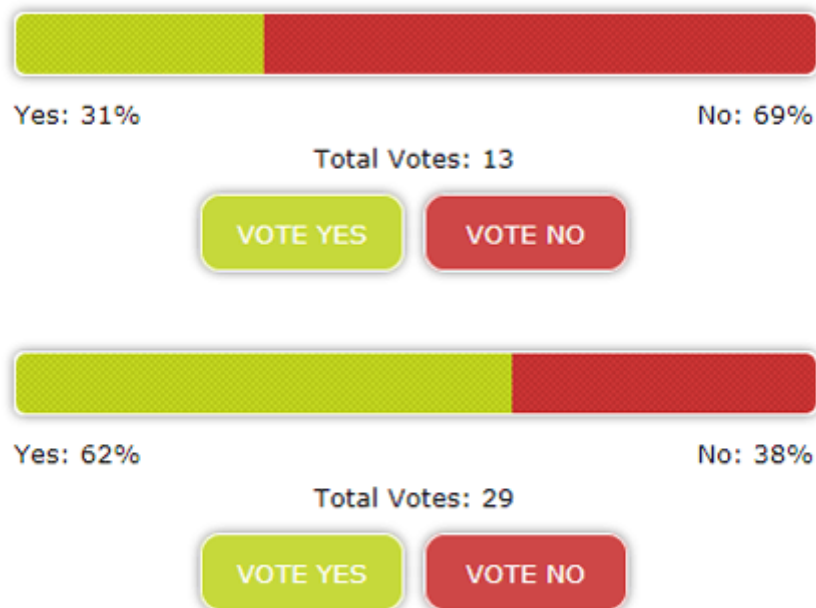

```
<script>  
$(document).ready(function(){  
    $("#jqyn_survey").ynosurvey();  
});  
</script>
```

- Use the same HTML structure that you see in the attached example
- Include ynosurvey.css in your page
- Don't forget the images folder if you want to see a background on your bars.

Multiple polls on the same page

You can create unlimited polls on the same page using different IDs for each one. So, for example, you could do something like this:

```
$(document).ready(function(){  
    $("#jqyn_survey").ynosurvey();  
    $("#jqyn_survey2").ynosurvey();  
});
```

Editable parts

You can remove unuseful HTML parts, but be sure that the bars are always visible; you can also modify CSS and images as you prefer but pay attention to the bars!

Browser support

This plugin has been tested on all the major browsers. It works on:

- Mozilla Firefox 3+
- Google Chrome
- Safari 5+
- Opera 9+
- Internet Explorer 6+

Only in modern browsers that support box-shadow and round corners can you see graceful graphic effects.
